

Brainware Intelligent Capture

Brainware Intelligent Capture by Hyland is an industry leading intelligent data capture solution that helps companies of any size eliminate manual data entry, automate document processing and gain visibility and control over their manual, labor intensive processes.

Hyland is a leader in providing content services software solutions for managing content, processes and cases for organizations across the globe. Hyland offers a complete set of content services technologies that can be used alone or in combination to manage content of any type. Technologies include workflow, case management, compliance, and internal and external collaboration.

Solution differentiation

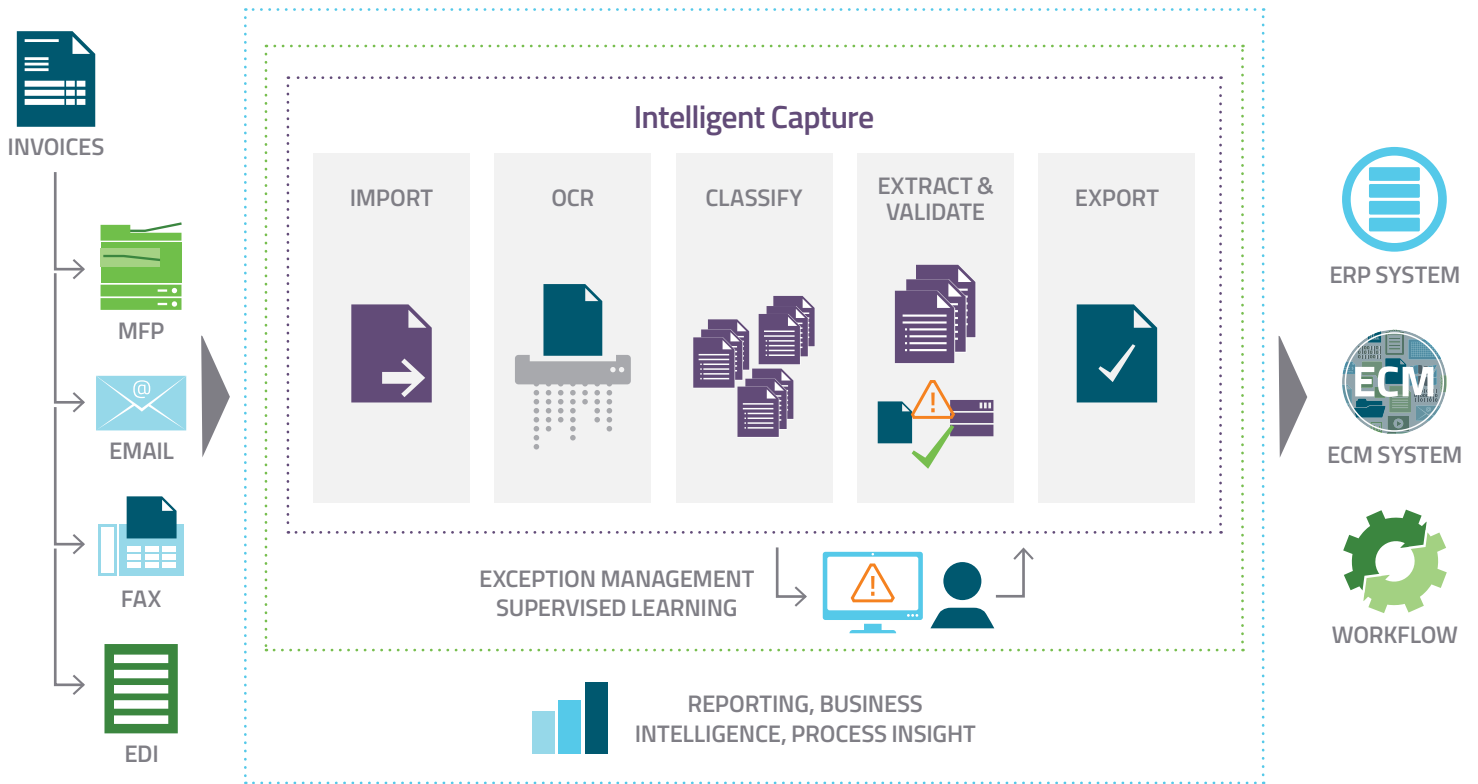

- Brainware Intelligent Capture automatically classifies and extracts data from large volumes of unstructured document images and native files without using templates, keywords, forms or zonal OCR.
 - Built using patented neural network, auto-learning and pattern matching technologies
 - Over \$100 million invested in R&D
 - IP portfolio includes 54 issued and 37 pending patents
 - Delivered with pre-built invoice processing capabilities minimizing customizations and speeding implementations
- Brainware Intelligent Capture is recognized as the most robust, scalable and accurate auto-classification and extraction product on the market
- Brainware Intelligent Capture delivers higher levels of “out-of-the-box” invoice automation by:
 - Leveraging pre-built “best practices” invoice processing functionality that minimizes the need for customizations and speeds time-to-value
 - Using patented associative search technology to accurately select invoicing vendor and to automatically pair invoice lines with PO lines in most ERP systems
 - Delivering pre-configured ability to process invoices in over 25 languages including those using Cyrillic and double-byte character sets, such as Chinese or Japanese
- Visibility Reporting Suite provides objective metrics on the solution and the people using the solution, giving end users insight and control over the newly automated processes
- Exports data into any backend system including ERP, ECM, CRM, image archive, existing workflow and others
- Classifies and extracts data from all document types, including mailroom, invoices, orders, remittances, contracts, loan docs, leases, HR docs, tax filings, land records, bank records, litigation files and many others
- Brainware Intelligent Capture can be used as an enterprise capture platform, able to extract meaningful data from any number of document types
- Ensures that data is not only entered far more quickly than manual entry, but also with a greater rate of accuracy than manual entry can deliver

Proven “out of the box” ability to process invoices

Recently, a proof-of-concept demonstration was conducted using 1,324 invoices provided by a large U.S. retailer. Without any specific customizations or invoice training, Hyland demonstrated the following for this specific retailer:

- All invoices were processed and validated in 4 hours with 3 Verifiers – effective rate of 110 invoices per FTE per hour
- 95% of all data fields extracted correctly – remaining 5% sent to Verifier for manual review/correction
- 27% of all invoices made ready-to-post in SAP (the client’s ERP) with no manual intervention whatsoever
