

HYLAND ONBASE WORKDAY STUDENT INTEGRATION

Speed more informed decision making with a single source of truth

As educational institutions continue to face decreasing technology budgets, staff and resources, they need to optimize their existing systems and maximize return on investment. Inefficiencies occur when student documents are received and employees working in the registrar's office or admissions manually update data in both the student information system (SIS) as well as the content services platform — a time-consuming process and inefficient duplication of data entry that can result in mismatched information between the two systems.

By integrating OnBase, Hyland's enterprise information platform, with Workday Student, universities can enhance performance from their student information system (SIS) and extend the value of their existing technology investments. With a seamless, out-of-the-box integration, schools are able to unify student data across the entire campus and create a single source of truth for a complete view. This means reduced duplication of work and wasted time searching for information while also increasing efficiencies and speeding more informed decision making.

HIGHLIGHTS:

- Captures and validates student data when indexing documents in OnBase
- Pushes student transcript data directly into Workday Student in real time to make sure information is readily accessible
- Document links are displayed on Workday Student screens for users to access student documents quickly and easily

IMPACT:

- Reduce manual data entry and increase efficiencies
- Speed more informed decision making
- Extend the value of existing technology investments
